DURAPLATE

the next stage in temporary traffic sign substrate evolution

Working with our substrate supply partners, **DURA**PLATE has been specially developed as the new standard for **HI-SPEED TEMPORARY TRAFFIC SIGNS** instantly making GRP Poly obsolete.

Specification details and benefits

- 5mm thick Polypropylene Copolymer
- Dense compound blend providing inherent strength
- Able to withstand heavy impact and robust handling
- Excellent heat and chemical resistance
- Low moisture permeability
- Easy and safe to cut – no glass fibre splinters
- Reduced production time
- Neater finish when engraved for personalisation and security
- 100% recyclable
- No brass eyelets required
- Snug fit toggle holes – no rattle

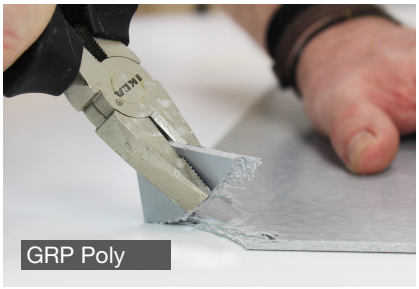
DURAPLATE

your best substrate option for HI-SPEED TEMPORARY TRAFFIC SIGNS

Why is **DURA**PLATE better than GRP Poly and Composite? It's as easy as:

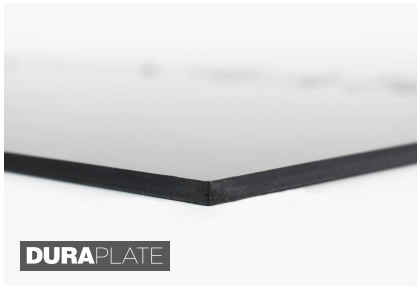
1) STRENGTH

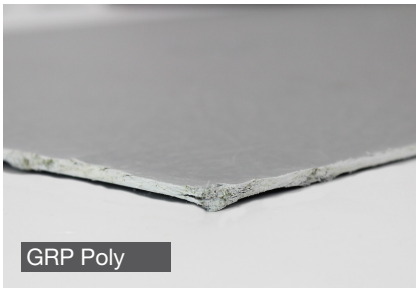
DURAPLATE significantly outperforms both GRP and Composite for strength and flexibility.

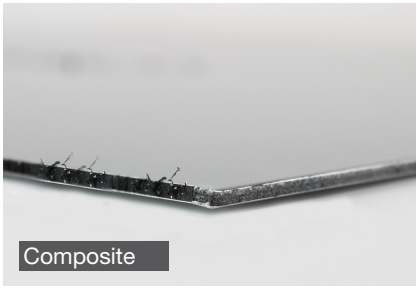


2) CLEAN CUTTING

DURAPLATE'S dense compound blend produces clean edges when cut, drilled or engraved with no resulting fibre splinters or shavings.







3) SNUG FIT TOGGLE HOLES

Both GRP Poly and Composite are 3mm thick materials. At 5mm, **DURA**PLATE fits more securely on Quick-Fit toggle fixings, reducing plate rattle to a minimum.
