

Number Plate drilling & installation guide

Reflective & Acrylic Plates

Follow these simple steps to avoid cracking or delaminating your plates.

NOTE:

To comply with BSAU 145e, install plates using adhesive pads only wherever possible. If mechanical fixings are necessary, these **MUST** be positioned outside of the readable area.

1. Remove existing plate and establish appropriate fixing points.

2. Apply a small piece of masking tape where hole is to be drilled.

3. Using a 6mm diameter acrylic bit, drill from the **REAR** of plate.
(Allow drill to do the work - don't apply too much pressure).

4. Remove masking tape and de-burr holes.

5. Position plate in correct location and carefully tighten fixings.

6. Polish plate using circular motion with a soft cloth to remove finger prints.
