

Recycling of Number Plates

We are proud to announce that we are the first **Number Plate** manufacturer in the UK to provide a **FREE** collection and recycling service for all your unwanted number plates.

How it works...

We will install spillages measuring 1200mm x 1000mm x 1000mm at your site. Once these are full of all your old plates, all you have to do is call Tennants UK and we will arrange for this to be collected and returned to us.

What happens to your waste?

The sorted recyclables will then be transported to reprocessors in the UK and abroad where they will be cleaned, processed and given a new life

therefore never entering landfill!

What does each substrate get recycled into?

Acrylic – reworked into monomer sheets of varying grades to be used in a variety of applications from construction to manufacturing.

Black plastic – on condition the material is originally from Tennants UK, the plastic will then be cleaned, turned back into new sheets of plastic where they will be manufactured into new number plates. This is called **CLOSED-LOOP** recycling.

Metal – will be melted down and used to manufacture a wide variety of products, including window frames, road signs, cast components.

And the best part...

This service is completely **FREE** and is included as part of the outstanding service we offer at Tennants UK. We are committed to zero landfill for all our waste and want to ensure that being environmentally friendly is simple and does not cost our customers a penny.
